

The Ultimate In Versatility and Space

CAB35 is our largest pullout cabinet. It is outfitted with a series of slots that will accept stationary or pullout shelves and mini drawers, which can be spaced apart to carry small electronic parts or large paint cans. It is the exact height of one 20.5" cabinet and one 14.5" cabinet stacked together, making it a valuable module in configurations. Office server station or home theater command center, AV stereo cabinet or computer station, laptop storage and charging station or parts cabinet - this cabinet can do it all. It is available with locking doors (CABDR35) or without doors (CAB35). As a stereo or AV component cabinet, it is wide enough to handle two stacks of electronic components

CAB35 / CABDR35 lives up to its 35-inch height

It is just the right height for a counter or a walk-up computer station. Our customers have been creating their retail counter system with Can-Am cabinets for over 30 years, and CAB35 / CABDR35 always finds a place. Put it on a caddy, finish it off with a mica top, and you've got the perfect rolling storage workbench for the office, warehouse, garage or workshop. It is equipped with a series of slots that accept our optional pullout or stationary shelves as well as mini drawers. You can mix and match these drawers and shelves to create just the solution you need. It lets you fit more shelves and drawers than any other cabinet, and they can be placed at just about any height. Shelves and drawers are sold separately.

SPECIFICATIONS

Weight: 55 lb (70 lb with locking doors)
